Figure 1. The structure of the proposed model. The model is composed of three main parts: a feature extraction module, a classification module, and a fusion module. The feature extraction module uses a combination of a convolutional neural network (CNN) and a recurrent neural network (RNN) to extract features from the input data. The classification module uses a support vector machine (SVM) to classify the extracted features. The fusion module combines the results of the classification module with the input data to produce the final output.
